## SUMMARY

---

- Software engineer with ~5 years building fullstack TypeScript products with Node.js, React and AWS, from monolith decomposition to serverless backends.
- Builds and publishes AI developer tooling in Python and TypeScript: retrieval (RAG) evaluation, MCP servers and Claude Code skills, released on npm and PyPI.
- Documentation-first way of working: specs, architecture decision records (ADRs) and CI quality gates on every project.

## SKILLS

---

- **Proficient:** TypeScript, JavaScript, Node.js (Express), React, Next.js, Python, REST API design, AWS (Lambda, API Gateway, DynamoDB, SQS, EventBridge, S3, CloudWatch), PostgreSQL, Prisma, Docker, GitHub Actions, Jest, Vitest, Playwright
- **AI engineering:** LLM integrations, structured outputs, RAG (BM25 + dense retrieval, evaluation), MCP servers, AI-assisted development with review (Claude Code, GitHub Copilot, Cursor)
- **Working knowledge:** Observability (Splunk, Grafana, Prometheus, Sentry), Cloudflare Workers, Redis, Terraform, SQL Server, Tailwind CSS
- **Familiar:** Go, Rust, Java (Spring Boot), Kubernetes (k3s), GraphQL, MongoDB

## WORK EXPERIENCE

---

**Thoughtworks (Brazil, remote)** · 01/2026 to present

*Senior Consultant, Software Developer*

- Developed reporting features across React and Node.js for a restaurant-technology client, working in a distributed delivery team (07/2026 to 09/2026).
- Contributed to a digital payments platform for a global cosmetics retailer (05/2026).
- Applied AI-assisted development practices with code review and validation of generated output.

**CI&T (remote)** · 01/2024 to 12/2025

*Software Engineer, Fullstack*

- Built and maintained backend services with Node.js (Express) and AWS Lambda for consumer platforms at scale.
- Implemented Splunk-based observability and monitoring for distributed services, shortening incident diagnosis.
- Expanded automated test coverage (Mocha, Jest) on REST APIs and microservices.

**TRINUS CO. (Goiânia, remote)** · 11/2022 to 12/2023

*Software Developer, Fullstack*

- Built an internal Kanban workspace with React and Node.js, adopted by 550+ employees.
- Decomposed the platform from a monolith into TypeScript/Node.js microservices with shared typed contracts, enabling parallel delivery across teams.

**V.SANTANA (Goiânia, remote)** · 12/2021 to 11/2022

*Software Developer, Fullstack*

- Delivered 10+ fullstack applications (ERP, educational and institutional) with React and Node.js, from requirements to deployment.

## SELECTED PROJECTS

---

- **Lucky:** Discord bot platform with a React dashboard, listed on top.gg. TypeScript monorepo (discord.js, Prisma, Redis/BullMQ, Sentry) with staging and production deploys, migration gate and mutation testing in CI.
- **hitgate:** Retrieval regression gate for RAG systems (Python, published on PyPI). Hybrid BM25 + dense retrieval with label-free evaluation; raised Hit@5 from 0.587 to 0.86.
- **sharekit:** CLI to share and install AI coding setups with preview and rollback (TypeScript, published on npm and PyPI), with security and cross-platform tests.

## EDUCATION AND CERTIFICATIONS

---

- Bachelor's Degree in Computer Systems, FIAP (2025)

- AWS Certified Cloud Practitioner (2026)

## **LANGUAGES**

---

- Portuguese: Native · English: Advanced (C1) · Spanish: Basic
